

Facts at a Glance

Overview MyCareTeam, in conjunction with Georgetown University Medical Center, develops software that is designed to help people with diabetes manage their disease. The company's diabetes offering has been successfully used for over five years by patients, doctors, and nurses to dramatically improve health and wellness in people with diabetes and to reduce overall health care costs.

Company Boston, MA-based MyCareTeam, Inc. was founded in 2005 and is privately held. Georgetown University Medical Center is located in Washington, DC and originally developed MCT-Diabetes in 2001.

Products The company's initial product offering, MCT-Diabetes, allows individuals with diabetes and their care providers to collaborate and monitor glucose levels across the Internet.

Differentiators

- MCT-Diabetes has been researched, developed and tested by Georgetown University Medical Center through independent trials and control groups
- A simple, icon-driven user interface makes the product easy to use
- Online capabilities facilitate collaboration between patients and caregivers
- Industry standard glucose meters are supported
- MCT-Diabetes is sold over the Internet to individuals on a subscription basis. It is also available as a professional edition.

Management

MyCareTeam, Inc's executive management team has deep experience in both the software and healthcare industries. The founding team combines proven experience building and selling software applications, vast clinical expertise, and a broad understanding of electronic healthcare management and telemedicine.
