### **MyCareTeam™ Unveils Key Enhancements to Flagship Diabetes Monitoring Product, MCT-Diabetes**

*New features include usability enhancements, support for additional glucose meters, and updated reporting capabilities.*

**Boston, MA. – March 21, 2006** – MyCareTeam, Inc., a leading vendor of On Demand Software as a Service software applications designed to help people manage diabetes, has released an updated version of its diabetes monitoring product, MCT-Diabetes. The new version includes support for additional glucose meters, updates to the user-interface, and enhanced reporting capabilities.

Specific enhancements to MCT-Diabetes include additional support for OneTouch Profile meters, updates to uploading data criteria, increased support for printing reports, enhanced performance for web pages and charts as well as additional diagnostic capabilities.

“We are thrilled to launch the newest version of MCT-Diabetes to our user community.”, said Jim Mingle, CEO of MyCareTeam, Inc. “Regular use of MCT-Diabetes has already been proven to lower HbA1C levels by 2% or more - these new product enhancements will certainly make it even easier for our users to further reduce HbA1c.”

#### **About MCT-Diabetes**

MCT-Diabetes is available to individuals and organizations as a behavior modification tool that allows individuals with diabetes and their care providers to collaborate and monitor glucose levels across the Internet. MCT-Diabetes facilitates collaboration, which improves the long-term management of diabetes. The product has been in active use by specific groups of people with Type 1 and Type 2 diabetes for several years. Clinical trials at Georgetown University Medical Center and at the Boston Veteran's Hospital (conducted by researchers from Brigham & Women's Hospital and Harvard Medical School) have demonstrated that consistent use of MCT-Diabetes results in a significant reduction in average blood glucose levels as measured by HbA1C. In both studies, the use of MCT-Diabetes resulted in a 2 percent decrease or higher in blood sugar levels.

MCT-Diabetes automatically uploads the patient's glucose readings and populates them into user-friendly report formats which can be read or securely shared with care providers. Other capabilities in the system include logs for blood pressure, exercise, laboratory results, and medications.

### **About MyCareTeam, Inc.**

MyCareTeam, Inc. was founded to provide On-Demand Software as a Service offerings that are designed to help people with diabetes to collaborate and manage their illness while reducing overall healthcare costs.
