MyCareTeam™ Enhances MCT-Diabetes Professional Edition with Podiatry Features

Latest professional version of MCT-Diabetes software helps podiatrists keep track of diabetic patient's foot condition

CHICAGO, IL. – June 26, 2007 – MyCareTeam, Inc., a leading vendor of software applications designed to help people manage diabetes, has unveiled podiatry enhancements to the professional edition of its MCT-Diabetes software product at the American Diabetes Association's 67th Annual Scientific Sessions Conference.

"The podiatry features of MCT-Diabetes will significantly increase the effectiveness of treatment between patients with diabetes and their podiatrists", said Jim Mingle, CEO of MyCareTeam. "These new features are yet another example of MyCareTeam's vision of tighter diabetes control and treatment response being implemented in our software."

Diabetic foot problems, such as ulcerations, infections, and gangrene, are the most common cause of hospitalization among diabetic patients. The new podiatry features of MCT-Diabetes allow podiatrists to routinely monitor a patient's feet by photographing an affected foot and cataloging the result online along with a patient's blood glucose readings and other valuable information related to the patient's diabetes. Once the foot photograph has been filed, the doctor can easily refer back to it and store subsequent photos for review and comparison in later visits.

"With the new features in the MCT enhanced Podiatry Module it will allow tighter control of the progress of the patients feet", said Dr. Pieter Roos, Podiatry, Sheikh Khalifa Medical City, Abu Dhabi, United Arab Emirates. "With a new photographic image database for every patient, one can follow ulceration progress. This will streamline the treatment process, as a picture tells a thousand words."

MCT-Diabetes Professional Edition is available immediately and is designed to be used in a clinical environment.

About MCT-Diabetes

MCT-Diabetes is a software product that allows individuals with diabetes and their care providers to collaborate and monitor glucose levels across the Internet. MCT-Diabetes facilitates collaboration, which improves the long-term management of diabetes. The intuitive, easy-to-use software application provides an opportunity for the patient to decide who (care providers, family members, friends) can have access to the patient's data and communicate with each other. Patients who do not wish to share access with care providers can print reports and graphs and take them to appointments for review.

About MyCareTeam, Inc.

MyCareTeam, Inc. was founded to provide software offerings that are designed to help people with diabetes to collaborate and manage their illness while reducing overall healthcare costs. The company's diabetes offering, MCT-Diabetes, has been successfully used, with proven results, for over five years by patients, doctors and nurses to dramatically improve the health and wellness in people with diabetes and reduce overall healthcare costs. MyCareTeam is headquartered in Boston and the company's website is www.mycareteam.com.
