MyCareTeam™ Releases Enhanced MCT-Diabetes Software Product

Newest version of MCT-Diabetes software increases customization capabilities and allows users to collaborate about their diabetes condition with doctors, clinicians and family members

Boston, MA. – December 18, 2006 – MyCareTeam, Inc., a leading vendor of software applications designed to help people manage diabetes, has announced the successful completion of a nationwide roll-out of the newest version of its flagship software product, MCT-Diabetes.

“We are thrilled with the newest version of MCT-Diabetes”, said Jim Mingle, CEO of MyCareTeam. “Our engineers have done a fantastic job enhancing the functionality of the software, while maintaining the easy-to-use interface that our users have come to rely on.”

The enhancements to MCT-Diabetes include new customization capabilities that are defined by individual user preferences. For example, glucose testing ranges can now be expanded or collapsed in order to loosen or tighten glucose control. In addition, users can adjust testing timeframes based upon their personal timeslot preferences. Another important enhancement includes the ability to further define the roles and responsibilities of each user’s caregiver.

MyCareTeam conducted a nationwide roll-out of the new version of MCT-Diabetes with a select group of users with diabetes. Overall, feedback has been extremely positive and included comments such as, “It was all very easy to use and it was great to see all of the data laid out in an easy manner to understand. It makes finding trends and patterns a million times better.” and “I find the software very handy to use, easy to navigate and has available important info to help manage properly. Keep up the GREAT work!”

MCT-Diabetes is available immediately and can be used on a personal basis or deployed in a clinical environment.

About MCT-Diabetes

MCT-Diabetes is a software product that allows individuals with diabetes and their care providers to collaborate and monitor glucose levels across the Internet. MCT-Diabetes facilitates collaboration, which improves the long-term management of diabetes. The intuitive, easy-to-use software application provides an opportunity for the patient to decide who (care providers, family members, friends) can have access to the patient's data and communicate with each other. Patients who do not wish to share access with care providers can print reports and graphs and take them to appointments for review.

About MyCareTeam, Inc.

MyCareTeam, Inc. was founded to provide software offerings that are designed to help people with diabetes to collaborate and manage their illness while reducing overall healthcare costs. The company's diabetes offering, MCT-Diabetes, has been successfully used, with proven results, for over five years by patients, doctors and nurses to dramatically improve the health and wellness in people with diabetes and reduce overall healthcare costs. MyCareTeam is headquartered in Boston and the company's website is www.mycareteam.com.
